Chapter 1. NANOSTRUCTURED METAL CLUSTERS AND COLLOIDS

Uwe Kreibig, Helmut Bönnemann, Josef Hormes

1. Preparation Methods for Nanoparticles and Cluster-Matter by “Physical” Means (U. Kreibig, Aachen)	2
1.1. Nanoparticles and Cluster Matter	2
1.2. Cluster-Matter Characterization and Properties	4
1.3. Particle Stability and Particle Stabilization	6
1.4. Cluster Aggregation	14
1.5. Particle Production Methods: A Survey	23
1.6. Atomic Vapor Aggregation Methods	28
1.7. Lithography Techniques to Produce Ordered Cluster Arrays	37
1.8. Concluding Remarks	40
2. Nanostructured Metal Colloids—Chemistry and Potential Applications (H. Bönnemann, Mülheim)	41
2.1. Wet Chemical Preparation Methods	41
2.2. Applications in Catalysis	52
2.3. Potential Applications in Materials Science	61
3. Characterization of the Geometric and Electronic Structure of Nanostructured Metal Colloids Using X-Ray Absorption Spectroscopy and Related Methods (J. Hormes, Bonn, Baton Rouge)	64
3.1. Introduction	64
3.2. Summary of Theoretical and Experimental Techniques	65
3.3. X-Ray Absorption Spectroscopy	66
3.4. Results from X-Ray Absorption Spectroscopy Measurements	68
3.5. X-Ray-Excited Photoelectron Spectroscopy	75
References	77
Reading List	85

Chapter 2. NANOPARTICLE THIN FILMS: AN APPROACH BASED ON SELF-ASSEMBLY

Murali Sastry

1. List of Acronyms	88
2. Introduction	88
2.1. “Bottom-Up” Approach to Nanoparticle Thin Films	89
3. Self-assembly	90
3.1. Basic Concepts	90
3.2. Self-Assembled Monolayers on 2D and 3D Surfaces	90
3.3. Some Applications of Surface-Derivatized Colloidal Particles	91
4. Nanoparticle Thin Films by Self-Assembly	95
4.1. Nanostructures Using Self-Assembled Colloid Monolayers (Nanosphere Lithography)	95
4.2. Nanoparticle Assembly Using 2D SAMs and Derivatized Polymer Films	97
4.3. Evaporation-Induced Self-Assembly of Nanoparticle Films	101

4.4. Nanoparticle Assembly Using Biological Templates	103
4.5. Layer-by-Layer Growth of Nanoparticle Films	106
4.6. Organization/Synthesis of Nanoparticles at the Air–Water Interface	110
4.7. Nanoparticle Films by Electrostatically Controlled Diffusion from Solution	114
4.8. Insertion Chemistry Approach to Nanoparticle Thin Films	118
5. Conclusions	118
Appendix: Modelling the QCM Data of Nanoparticle Diffusion into Lipid Films in Terms of a 1D Diffusion Model	119
Acknowledgments	119
References	119

Chapter 3. ASSEMBLY OF COLLOIDAL PARTICLES INTO NANOSTRUCTURED MATERIALS AND MICROSCOPIC DEVICES

Orlin D. Velev

1. Introduction	125
2. Forces Guiding the Colloidal Assembly	126
2.1. Derjaguin–Landau–Verwey–Overbeek (DLVO), Hydrophobic, Steric, and Depletion Forces	126
2.2. Capillary Forces at Fluid Interfaces	127
2.3. Hydrodynamic Forces	127
2.4. Biospecific Interactions and Binding	127
3. Two-Dimensional Assembly in Thin Liquid Films	128
3.1. Assembly in Films Bound by Solid Surfaces	128
3.2. Convective Assembly in Wetting Films on a Solid Surface	130
3.3. Assembly in Wetting Films on Liquid Interfaces	135
3.4. Assembly in Foam Films	136
4. Two-Dimensional Assembly on Single Interfaces	139
4.1. Crystallization on Flat Fluid and Solid Interfaces	139
4.2. Crystallization on Emulsion Droplets, Liposomes and Tubules	143
5. Three-Dimensional Assembly in the Vicinity of Surfaces	146
5.1. 3D Crystals Grown by Sedimentation, Drying, and Filtration	146
5.2. Three-Dimensional Assembly inside Emulsion Droplets	148
6. Applications in Novel Materials	151
6.1. Materials Based on the Colloidal Crystals Themselves	152
6.2. Materials Made by Replication of a Crystalline Structure	154
6.3. Assembly of Colloidal Particles into Functional Structures and Devices	158
7. Concluding Remarks	162
Acknowledgments	163
References	163

Chapter 4. THIN FILM NANOFABRICATION BY ALTERNATE ADSORPTION OF POLYIONS, NANOPARTICLES, AND PROTEINS

Yuri M. Lvov

1. Introduction	170
2. Description of the Polycation and Polyanion Assembly	170
2.1. General Procedure	170
2.2. Kinetics of Polyion Adsorption	172
2.3. First Layers and Precursor Film	172
2.4. Multilayer Structure	173
2.5. Stoichiometry of the Components and Polyion Molecular Weight	174
2.6. Nonequilibrium Growth and Admixed Polyion Complexes	174
2.7. Polyion Films for Biocompatible Coverage	175
2.8. Multipolar Dye and Liposome Assembly	175
2.9. Combination of Polyion Assembly with the Langmuir–Blodgett Technique. Hydrophobic Interaction	176
2.10. Surface Patterning with Linear Polyion Films	176

3. Nanoparticle–Polyion Multilayers	176
3.1. Silica Multilayers	176
3.2. Latex Assembly	177
3.3. Compact MnO ₂ –Poly(ethyleneimine) Multilayers	178
3.4. Open-Structured TiO ₂ –Poly(styrenesulfonate) Films	179
3.5. Organized Gold–Polycation Multilayers	179
3.6. Layered Ceramics (Plates)	180
3.7. Tubule Ceramics	180
3.8. Assembly of Tubule–Sphere Superlattices	181
3.9. Polyoxometallates	181
3.10. Multilayer Nanoreactors for Metallic and Semiconducting Particles. Fabrication of Microporous Films	181
4. Protein Multilayers	182
4.1. General Description of the Protein Assembly Procedure	182
4.2. Electrochemistry of Protein–Polyion Films	183
4.3. Covalent Cross-linking of Multilayers	183
4.4. Different Proteins in Alternation with Polyions	183
4.5. Sequential Catalysis in Organized Multienzyme Films	183
5. Nanoparticle Shell Assembly on Microtemplates. Bio-Nanoreactors	184
5.1. Spherical Core	184
5.2. Caps and Helices on Tubules	184
5.3. Bio-nanoreactors	185
6. Areas of Current and Potential Applications	186
6.1. Current Applications	186
6.2. Potential Applications	186
6.3. Advantages and Difficulties of the Technique	186
7. Conclusions	187
Acknowledgments	187
References	187

Chapter 5. CORE-SHELL NANOPARTICLES AND ASSEMBLIES THEREOF

*Luis M. Liz-Marzán, Miguel A. Correa-Duarte, Isabel Pastoriza-Santos,
Paul Mulvaney, Thearith Ung, Michael Giersig, Nicholas A. Kotov*

1. Origins of Colloid Stability	190
1.1. Double-Layer Repulsion	190
1.2. van der Waals Forces	192
1.3. Total Potential Energy of Interaction	192
1.4. Steric Stabilization	193
1.5. Nanoparticle Stabilization	194
1.6. Stabilization by Silica Shells	195
2. Nanosized Core-Shell Particles	196
2.1. Dielectric@Dielectric Core-Shell Colloids	197
2.2. Metal@Metal Core-Shell Colloids	198
2.3. Metal@Dielectric Core-Shell Colloids	200
2.4. Dielectric@Metal Core-Shell Colloids	203
2.5. Semiconductor@Semiconductor Core-Shell Colloids	204
3. Optical Properties of Core-Shell Nanosized Metal Colloids	205
3.1. Optical Properties of Metal Particles	206
3.2. Optical Properties of Core-Shell Colloid Particles	207
3.3. Optical Properties of Au@SiO ₂ Dilute Colloids	207
3.4. Optical Properties of SiO ₂ @Au Colloids	210
4. Chemical Reactions at Coated Nanoparticles	210
4.1. Dissolution of Gold and Silver Cores	211
4.2. The Kinetics of Core Oxidation	212
4.3. Oxidation of Ag by Molecular Iodine and Sulfide Ions	214
4.4. Protection of Chalcogenides against Photodegradation	216
4.5. Redox Catalysis with Ag@SiO ₂ Colloids	217
5. Thin Films Based on Core-Shell Nanoparticles	218
5.1. Organization of Nanoparticles in Two Dimensions	218
5.2. Two-Dimensional Assemblies of Core-Shell Nanoparticles	221

5.3. Fe ₃ O ₄ @SiO ₂ Thin Films	222
5.4. Au@SiO ₂ Thin Films	224
6. Three-Dimensional Nanostructures of Core-Shell Colloids	226
6.1. Ordered Colloidal Dispersions	226
6.2. Artificial Opals	229
References	232

Chapter 6. NANOCRYSTALLINE AND AMORPHOUS THIN FILM SYSTEMS INCLUDING LOW-DIMENSIONAL CHALCOGENIDE MATERIALS

Diana Nesheva

1. Introduction	239
1.1. Amorphous Chalcogenide Films and Multilayers	239
1.2. II–VI Semiconductor Nanocrystals	240
2. Chalcogenide Amorphous Multilayers	241
2.1. Preparation Techniques	241
2.2. Periodicity and Interface Quality	241
2.3. Interface Changes Induced by Annealing and Light Exposure	243
2.4. Influence of Interfaces on Sublayer Properties	246
2.5. Stability of Chalcogenide AMLs	251
2.6. Possibilities for Applications of Chalcogenide AMLs	256
3. II–VI Semiconductor Nanocrystals	256
3.1. Nanocrystalline/Amorphous Multilayers	256
3.2. II–VI Semiconductor Quantum Dots	262
3.3. Interface Alloying	273
3.4. Possibilities for Application of II–VI Nanocrystals	275
4. Concluding Remarks	276
Acknowledgments	276
References	276

Chapter 7. SEMICONDUCTOR NANOCRYSTALS FROM LANGMUIR–BLODGETT FILMS: SYNTHESIS, CHARACTERIZATION, AND APPLICATIONS

Paolo Facci

1. Introduction	281
2. Quantum Confinement Effects in Semiconductor Nanoclusters	283
3. Langmuir–Blodgett Films as Templates for the Synthesis of Low Dimensionality Semiconductors	284
3.1. Langmuir–Blodgett Technique	285
3.2. Langmuir–Blodgett Films of Fatty Acid Salts	286
4. Synthesis of Semiconductor Nanocrystals from Fatty Acid Salt LB Film Precursors	286
4.1. Monitoring the Nanocrystal Growth	287
4.2. The Microgravimetry Method for Probing Reaction Kinetics	288
4.3. X-ray Diffraction	289
4.4. FTIR Spectroscopy for Monitoring the Completion of the Reaction	290
4.5. Scanning Tunneling Microscopy	290
5. Formation of Ultrathin Films by Semiconductor Nanocrystal Aggregation	292
5.1. Experimental Evidence	292
5.2. Microscopic Evidence of the Structure of the Residual Semiconductor Nanocrystal Film: STM and AFM	293
5.3. Optical Anisotropy of CdS Nanocrystals	297
5.4. Resonance Raman Scattering of CdS Nanoclusters	298
6. Tailored Synthesis of Nanocrystalline Alloys of II–VI Semiconductors from Molecular Multilayer Templates	300
7. Semiconductor Nanocrystal Ultrathin Layers: Towards New Materials for Electronics	301
8. Semiconductor Nanocrystals from LB Precursors and Monoelectron Phenomena	303
8.1. Quantized Charge Tunneling	303
8.2. Measuring Monoelectron Phenomena by STM	304

8.3. Room Temperature Single Electron Junctions	306
9. Concluding Remarks	308
References	308

Chapter 8. CRYSTALLINE NANOPARTICLES IN GLASSES FOR OPTICAL APPLICATIONS

J. Fick

1. Introduction	311
2. Theoretical Background	312
2.1. Linear Optics	312
2.2. Nonlinear Optics	315
3. Characterization Techniques	319
3.1. Linear Optical Characterization Techniques	319
3.2. Nonlinear Optical Characterization Techniques	320
4. Semiconductor-Doped Glass Fabrication	324
4.1. Melt Quenching	324
4.2. Sputtering	325
4.3. Ion Implantation	325
4.4. Laser Ablation	326
4.5. Sol-Gel	326
5. Physical Characterization	329
5.1. Linear Characterization	329
5.2. Nonlinear Properties	337
6. Applications	341
6.1. Figure of Merit	341
6.2. Waveguide Fabrication	342
6.3. Devices	342
Acknowledgments	346
References	346

Chapter 9. *IN SITU* OBSERVATION DURING MOLECULAR BEAM EPITAXY: IMPURITY INCORPORATION AND DISSIMILAR MATERIALS EPITAXIAL GROWTH ON GaAs(001)

L. Däweritz

1. Introduction	351
2. Fundamentals of MBE and <i>in situ</i> Analysis	353
3. GaAs(001) Templates	355
3.1. Reconstruction	355
3.2. RHEED Characterization	356
3.3. STM Imaging	358
3.4. RDS Characterization	358
4. Si Incorporation on GaAs(001) at Low Substrate Temperature	360
4.1. GaAs(001)-(2 × 4) Template without an Intentional Supply of Arsenic	360
4.2. GaAs(001)-c(4 × 4) Template without an Intentional Supply of Arsenic	361
4.3. GaAs(001)-c(4 × 4) Template with an Intentional Supply of Arsenic	362
5. Si Incorporation on GaAs(001) at High Substrate Temperature	362
5.1. GaAs(001)-β2(2 × 4) Template	364
5.2. GaAs(001)-α(2 × 4) Template	364
6. MnAs-on-GaAs(001): a Model System for the Epitaxy of Dissimilar Materials	376
6.1. MnAs Nucleation and Orientation Relationship on GaAs(001)	376
6.2. Surface Reconstruction of MnAs(1100)	378
6.3. Growth Mode	380
6.4. MnAs/GaAs Interface	381
7. Concluding Remarks	383
Acknowledgments	384
References	384

**Chapter 10. MAGNETRON ENHANCED REACTIVE ION ETCHING
(MERIE) MODE PLASMA-INDUCED DEFECTS IN
SiO₂-Si MICROSTRUCTURES**

E. Atanassova

1. Introduction	387
2. MERIE-Mode Plasma-Induced Charges in the Si–SiO ₂ Structure	388
2.1. Thin Oxide MOS Damage Caused by Wafer Charging	388
2.2. Room Temperature Reduction of MERIE-Like Plasma-Induced Interface States	394
2.3. Mobility Degradation of the Inversion Carriers	397
3. Conclusion	402
Acknowledgments	403
References	403

**Chapter 11. ASSOCIATION COLLOIDS: CMC A PROPERTY
TO CALCULATE**

Víctor Mosquera, Manuel García, Luis M. Varela

1. Introduction	405
2. Equilibrium Properties of Charged Complex Fluids	406
3. Transport Properties of Charged Complex Fluids	409
4. Theoretical Background	410
5. Association Colloids: CMC a Property to Calculate	413
5.1. Runge–Kutta Integration Method	416
5.2. Levenberg–Marquardt Fitting Algorithm	417
5.3. Flux Diagrams	418
6. Thermodynamics of Micellization	421
7. Determination of the CMC by Dielectric Constant Measurements	422
References	425

**Chapter 12. STUDY OF DEHYDROCHLORINATION REACTIONS IN
MICELLAR SOLUTIONS**

*María Luisa Moyá, María Muñoz, Amalia Rodríguez,
María del Mar Graciani, Gaspar Fernández*

1. Introduction	427
2. The Kinetics of Dehydrochlorination	428
3. Kinetics of Dehydrochlorination in Nonionic Micellar Solutions	429
4. Kinetics of Dehydrochlorination in Cationic Micellar Solutions	431
4.1. In the Absence of Additives	431
4.2. In the Presence of Salts	444
4.3. In the Presence of Alcohols	448
5. Kinetics of Dehydrochlorination in Sulfobetaine Micellar Solutions	457
6. Kinetics of Dehydrochlorination in Microemulsions	461
Acknowledgments	463
References	463

**Chapter 13. ENCAPSULATION OF FLUOROPHORES IN MULTIPLE
MICROENVIRONMENTS IN SURFACTANT-BASED
SUPRAMOLECULAR ASSEMBLIES**

Kerry K. Karukstis

1. Supramolecular Assemblies	465
1.1. Aqueous Micelles	466
1.2. Unilamellar Vesicles	466
1.3. Reverse Micelles	467
1.4. Surfactant–Dendrimer Supramolecular Arrays	467
2. Selection of Spectroscopic Molecular Probes	468
3. Overview of Fluorescence Spectroscopy	468
4. Sensitivity of Fluorescence Probes to the Microenvironment	469

CONTENTS

xvii

5. Characterization of Supramolecular Assemblies using Fluorescence Probes with ICT- and TICT-State Formation	470
5.1. 9,9'-Bianthryl and Derivatives	470
5.2. 7-Diethylaminocoumarins	471
5.3. Nile Red	474
5.4. DMABN	477
5.5. TNS and ANS	479
5.6. Prodan and Laurdan	480
5.7. Hydroxyanthraquinones	487
6. Summary	489
Acknowledgment	489
References	489
Index	493
